

Product name: ENDORFY LIX Plus Onyx White
Product code: EY6A003

The ENDORFY LIX Plus Onyx White has a truly regal flair – but doesn't shy away from the battlefield either. It's like a knight in shining armor, who competes in beauty pageants after work.

It weighs just 59 grams, yet its heart is made of solid gold in the form of the tried-and-tested PixArt PAW3370 sensor. To complete the package, we equipped it with extra durable [mechanical](#) Kailh GM 8.0 microswitches. This beauty can really pack a punch!

Ladies and gentlemen, Onyx White!

The greatest artists draw inspiration from Mother Nature and so do we. We designed the entire series of products around a rare and durable mineral, the elegant white onyx.

Famous among connoisseurs for its high strength and extraordinary beauty, the gemstone is like a better and prettier version of marble. Luckily, the mouse isn't heavy as a rock – at only 59 g, the LIX Plus Onyx White is a true featherweight champion.

LIX marks the spot

The LIX Plus Onyx White is a complete package – armed to the teeth with high-end components and manufactured with the greatest of care. Not only will it easily keep up with your fast-paced lifestyle, but it'll also last years at your side.

Others might wither and die, but ~~a diamond~~ [the Onyx White](#) is forever.

The LIX weighs only 59 g and moves on PTFE slides. We installed a sensitive PixArt PAW3370 sensor (19 000 DPI), which catches even subtle maneuvers. Add to this Kailh GM 8.0 microswitches and you have a set that will survive up to 80 (!) m (!!) clicks. But the high-tech sensor comes with other perks too – it's flexible and adapts to your playstyle. You can fine-tune its Lift-Off distance, polling rate, and even debounce time for that extra edge against your opponents. Imagine the possibilities!

59 g of awesome

The style of the case is called "honeycomb", and it's one of the secrets behind the ultralight weight of the LIX Plus Onyx White. But it doesn't only keep it slender, it also saves your hand from sweating – even during clicking marathons.

In Roman numerals "LIX" equals 59. Makes sense, doesn't it?

The breathable housing ensures proper air circulation and keeps your busy hand cool. Additionally, the LIX Plus is equipped with slick PTFE feet to make sure it'll slide across any mousepad effortlessly.

Resilience meets speed

The mouse glides across the mousepad smoothly like a figure skater performing at the Olympics – so effortless, delicate, and elegant that it's hard to overstate how tough these elite athletes have to be to succeed.

The LIX Plus Onyx White is exactly like that. Subtle and ephemeral, down-to-earth and relentless.

Equipped with Kailh GM 8.0 that are not only quick to act but also long-lasting – their lifespan estimated at 80 m clicks means you can click to your heart's delight. If you're in the market for reliable microswitches that'll last years, then place your bets on the Kailh GM.

Light up

Visually, the LIX Plus Onyx White is a guaranteed winner. Then the ARGB kicks in and the crowd goes wild. Out of this world!

With the LIX Plus Onyx White you can backlight the ENDORFY logo, the scroll wheel, and even the strip around the back of the case. Pick your own color or use one of the predefined effects – you can also quickly change the configuration using the dedicated software.

1.8 m of freedom

An unwieldy cable tugging at your mouse in the middle of a scrim is every technology hero's worst nightmare. We've cried over spilt milk energy drinks countless times, but you don't have to. LIX Plus Onyx White's long and soft cable is our new MVP.

Our "paracord" cable is more flexible than you'd expect. Its outer sheath of woven fiber has one job only – to protect the cable from damage. It's soft and light like your childhood teddy bear, so it won't interfere with your work. Additionally, it's 1.8 m long – plenty enough for the LIX Plus Onyx White to slide freely across the mousepad.

Trust your ~~guts~~ LIX's software

With LIX Plus Onyx White you ~~live~~ [click](#) as you like. Thanks to the dedicated software, you have full control over the mouse and all its perks. Make your own rules – change the sensitivity and LOD, customize the ARGB backlight, and record macros.
