

Product name: ENDORFY LIX Onyx White
Product code: EY6A004

The ENDORFY LIX Onyx White is an elegant mouse with more than one ace up its sleeve. Graceful like a ballet dancer, it hides reliable and battle-proven components from renowned manufacturers. To put it simply – it's never gonna give you up, never gonna let you down...

Jokes aside, there isn't a thing this beauty can't do. Equipped with a PixArt PMW3325 sensor and [mechanical](#) Kailh GM 4.0 microswitches, it's doomed to succeed. And score additional style points in the process, thanks to the unique coloring and ARGB backlight.

Of house Onyx White

This extraordinary white-and-silver series is so eye-catching, you can even make DIY Christmas decorations using the LIX Onyx White mice. We know we did.

While designing these products, we drew inspiration from Mother Nature herself – modeling them after white onyx. This rare and precious mineral is famous among connoisseurs for its high strength and extraordinary beauty.

Rumour has it that the Onyx White series boosts one's creativity. We haven't tested it yet, but that'd explain its extreme popularity amongst creators.

Hellishly fast PixArt PMW3325

The LIX Onyx White guarantees [100% fun](#) with 0 delays. Let your instincts take over and the mouse will do the rest. With the LIX Onyx White by your side, you're setting yourself up for a quick win.

Inside is pretty cool, too. We closed the PixArt PMW3325 sensor with 8.000 DPI sensitivity in it, so it won't miss any maneuver (even the most subtle one). In the package there are also Kailh GM 4.0 microswitches, which you can beat without worrying that in a moment something will crunch under the buttons.

Light as a feather

The style of the case is called "honeycomb", and it's one of the secrets behind the ultralight weight of the LIX Onyx White. But it doesn't only keep it slender, it also saves your hand from sweating – even during clicking marathons.

In Roman numerals "LIX" equals 59. Makes sense, doesn't it?

The breathable housing ensures proper air circulation and keeps your busy hand cool. Additionally, the LIX is equipped with slick PTFE feet to make sure it'll slide across any mousepad effortlessly.

Harder, better, faster, [Kailh](#)

The LIX Onyx White is made for a fast-paced lifestyle. We can totally imagine it winning a beauty pageant and a strongman competition over the course of a single weekend.

Despite looking like a lacey piece of contemporary art, it's equipped with heavy-duty components.

The Kailh GM 4.0 microswitches are ultra-fast and ultra-durable. They process every click in the fraction of a second, and their lifetime is estimated at 60 m clicks. They can easily withstand your non-stop clicking from dawn until the late hours of the night. If you're in the market for reliable microswitches that'll last you years, then place your bets on the Kailh GM 4.0.

Trick of the light

Visually, the LIX Onyx White is a guaranteed winner. Then the ARGB kicks in and the crowd goes wild. Out of this world!

With the LIX Onyx White you can backlight the ENDORFY logo, the scroll wheel, and even the strip around the back of the case. Pick your own color or use one of the predefined effects – you can also quickly change the configuration using the dedicated software.

1.8 m of freedom

An unwieldy cable tugging at your mouse in the middle of a scrim is every technology hero's worst nightmare. We've cried over spilt milk energy drinks countless times, but you don't have to. LIX Onyx White's long and soft cable is our new MVP.

Our "paracord" cable is more flexible than you'd expect. Its outer sheath of woven fiber has one job only – to protect the cable from damage. It's soft and light like your childhood teddy bear, so it won't interfere with your work. Additionally, it's 1.8 m long – plenty enough for the LIX Onyx White to slide freely across the mousepad.

Trust your ~~guts~~ LIX's software

With the LIX you live [click](#) as you like. Thanks to the dedicated software, you have full control over the mouse and all its perks. Make your own rules – change the sensitivity, customize the ARGB backlight, and record macros.
