

**Product name: ENDORFY AXIS Streaming Onyx White**  
**Product code: EY1B007**

1000 points for house Onyx White! The ENDORFY AXIS Streaming Onyx White in (obviously) white truly raises the bar when it comes to combining out-of-this-world looks with clean, high-quality audio. Enjoy the unmatched freedom of [creation](#) with adjustable directionality — it's a mic that fits any content scenario and does it all in style too.

The [purity](#) of your recording is taken care of by the built-in pop filter and an anti-shock mount. The former blocks the explosive consonants from damaging your audience's ears, while the latter protects the mic itself from the vibrations carried through the desk.

### **Snow [Onyx White](#)**

As one famous comedian put it: "B-E-A-UTIFUL". We designed a whole series of peripherals and accessories after the precious mineral, white onyx, famous among connoisseurs for its high strength and unique beauty. Bright [and elegant](#), the AXIS Streaming Onyx White is guaranteed to catch the eye of your viewers.

### **Live to create, create to live**

You're a renaissance person and you can do it all — streams and vlogs, podcasts and interviews, maybe even music recordings or round table discussions and tabletop games. You need hardware equally versatile and high quality. That's where the AXIS Streaming Onyx White shines [the brightest](#) thanks to its multi-functional, adjustable directionality.

Pick your champion — cardioid (one direction), stereo (spatial channels), two-way (opposite sides), or omnidirectional (360° surround) characteristic, depending on what suits your needs best. Easy to adjust and clearly labeled, the top LEDs show you the currently activated mode.

The quality of your recording material will be [immaculate](#) either way, thanks to the built-in pop filter blocking the explosive consonants and an anti-shock mount protecting the mic from the vibrations carried through the desk. Enjoy the freedom of creation without having to walk on eggshells around your gear.

### **Reporting for duty**

A knight in shining armor, the AXIS Streaming Onyx White is always where you need it. Its metal base comes conveniently put together already and doesn't take much space on the desk — so there's room left for other important gadgets.

The sturdy base keeps the mic stable wherever you currently need it, the rubber feet preventing it from sliding around the desk. And if you want to use the Streaming or Studio Boom Arm instead — not a problem, just unscrew the mic. [You do you!](#)

### **Everything [Audio](#) under control**

With the AXIS Streaming Onyx White mic, you can easily control the quality of your recordings in real-time. This is a convenient option when podcasting or streaming and will have you sounding like a pro in [any](#) situation.

Just plug your headphones into the mic and become a sound engineer.

The AXIS Streaming Onyx White has a built-in [3.5 mm](#) headphone jack along with a potentiometer that lets you conveniently adjust the listening volume at any time. It also sports a useful gain knob, so you can fine-tune the recording levels in a single, smooth movement. You can mute it in no time too — thanks to the touch button on the top of the capsule, which will light up in red whenever you're "off air".

### **Shining, shimmering, splendid**

The devil is in the details, and the AXIS Streaming Onyx White is hellishly attractive — the [ARGB](#) backlight making it a real eye-catcher.

The capsule hides LEDs that light up with all the colors of the ~~wind~~ [rainbow](#). Throw a disco party at home or pick a color that fits the rest of your setup. This shining beauty is guaranteed to make your friends and viewers jealous.

You can choose from 6 different solid colors: green, cyan, blue, pink, red, yellow, or pick a colorful rainbow glow that changes flowingly. Adjust it on the fly using the button on the bottom of the mic or turn off the backlight completely by holding it for 3 seconds.

### **Plug & talk**

Setting up the AXIS Streaming Onyx White is not rocket science. The microphone comes with everything you need already included — mount it, plug it into your computer and you're good to go. Enjoy the new, superior quality of your audio!

Connect the microphone within seconds with the included USB-C cable — it's [compatible](#) with the most popular operating systems: Windows, macOS, and Linux.
