

Product name: ENDORFY GEM Onyx White
Product code: EY6A012

When you buy equipment, sometimes you have to choose between a unique design and good parameters. Luckily, the ENDORFY GEM Onyx White has [both](#). It's a light (67 g) and eye-catching mouse with an ARGB backlight and PTFE sliders. Inside of the GEM, we hid the sensitive (up to 8 000 DPI) PixArt PMW3325 sensor. It turns your every little maneuver into a wide movement on the screen – players and creators around the world like it ;)

Inside of the GEM housing, we also enclosed fast [and durable](#) Kailh GM 4.0 microswitches. They're small, but they process every click faster than you can say, "Wow!". Seriously – we tested it a few times.

Looks like mouse, but it's Onyx

We designed the GEM Onyx White with the [white](#) variety of onyx in mind. It's a unique mineral that looks like marble but is more resistant. Our mouse is precisely the same – durable and so beautiful that it could compete in a beauty pageant for mice.

If someone organized one, just let us know.

Meet PixArt PMW3325

Work (and entertainment) is like real life – there's no time for lag. When you do everything at 100%, you need hardware that keeps up with you. That's why we made sure that the GEM Onyx White transforms your [mouse's](#) every move into a wide maneuver on the screen.

The heart of the GEM Onyx White is the battle-proven PixArt PMW3325 sensor – hellishly precise up to 8 000 DPI. Just gently move the mouse and your in-game character will turn towards the enemy at the speed of light. And you are the winner ;)

Easy [breezy](#)

Some will probably say that GEM Onyx White weighs a little more because of its construction... But the truth is that at 67 g, it glides across the mousepad as fast as your neighbor runs up to the window when s/he hears noise on the street.

The GEM is equipped with slick [PTFE](#) that give it minimal resistance. This solution works perfectly with all mousepads – including everything from standard to even "control" and "speed" types.

Kailh GM 4.0 ~~warriors~~ [microswitches](#)

Remember when we said that the GEM Onyx White is stronger than marble? We've tested it by hitting buttons for several hours ;)

Kailh GM 4.0 microswitches are ultra-fast [and ultra-durable](#). They process every click in the fraction of a second, and their lifetime is estimated at 60 m clicks.

We have ARGB and won't hesitate to use it

If you're hunting for great-looking equipment that can instantly spice up your desk, then we've good news– your quest is complete. GEM Onyx White features

an [ARGB](#) backlight and won't hesitate to add some moody ambiance to your war room.

With the GEM Onyx White you can backlight the ENDORFY logo, the scroll wheel, and even the strip around the back of the case. Pick your own color or use one of the predefined effects – you can quickly change the whole configuration using the dedicated software.

Long and soft

An unwieldy cable tugging at your mouse in the middle of a scrim is every technology hero's worst nightmare. We've cried over spilt ~~milk~~ [cappuccino](#) countless times, but you don't have to anymore. GEM's long and soft cable is our new MVP.

Our "[paracord](#)" cable is more flexible than you'd expect. Its outer sheath of woven fiber has one job only – to protect the cable from damage. It's soft and light like your childhood teddy bear, so it won't interfere with your work. Additionally, it's 1.8 m long – plenty for the GEM Onyx White to slide freely across the mousepad.

Live [Click](#) as you like

With GEM Onyx White you ~~live~~ [click](#) as you like. Thanks to the dedicated software, you have full control over the mouse and all its perks. Make your own rules – change its sensitivity, customize the ARGB backlight, and record macros.
